A Project Report

On

MS-Admit : AI-Powered Admission Competitiveness and Profile Optimizer

Submitted in partial fulfilment of the requirements of

University of Mumbai

For the Degree of

Bachelor of Technology

in

COMPUTER ENGINEERING

Submitted by

Samiksha Khandagale
Shivangi Khandelwal
Shubham Khilari
Racheal Kodiyan

Supervised by

Dr.Chhaya Pawar

Department of Computer Engineering

Agnel Charities',Fr. Conceicao Rodrigues Institute of Technology

(An Autonomous Institute Permanently Affiliated to University of Mumbai)

Sector 9A, Vashi, Navi Mumbai - 400703

UNIVERSITY OF MUMBAI

2026-2027

APPROVAL SHEET

This is to certify that the project entitled

"MS-Admit : AI-Powered Admission Competitiveness and Profile Optimizer"

Submitted by

Samiksha Khandagale 1023151
Shivangi Khandelwal 1023152
Shubham Khilari 1023153
Racheal Kodiyan 1023154

In partial fulfilment of degree of B.Tech (Semester VII) in Computer Engineering for continous assessment of Major project is approved.

Supervisor(s) : _____

Project Coordinator(s) : _____

Examiners : 1. _____

2. _____

Head of Department : _____

Date :

Place : Navi Mumbai

COLLEGE SEAL

Declaration

We declare that this written submission for B.E. Declaration entitled "**MS-Admit : AI-Powered Admission Competitiveness and Profile Optimizer**" represents our ideas in our own words and where others' ideas or words have been included. We have adequately cited and referenced the sources. We also declare that we have adhered to all principles of academic honesty and integrity and have not misrepresented, fabricated, or falsified any ideas/data/fact/source in our submission. We understand that any violation of the above will cause disciplinary action by the institute and also evoke penal action from the sources which have thus not been properly cited or from whom permission has not been taken when needed.

Project Group Members:

Abstract

Graduate admissions requires a challenging decision; as the requirements can be different, as well as the backgrounds of the students, and as a result of admission standards, acceptance criteria is different. Nowadays, most university recommendation platforms use QS rankings or generic suggestions, which means they provide very little personal help or detailed explanations. This article highlights MsAdmit a framework to analyze data that aids in the decision making process and develop unique ways to prepare and apply for graduate applications, specifically for Master's in Computer Science programs. A system that is being recommended uses machine learning and big language models to look for applicant profiles. These profiles come from information such as GPA, scores from standard tests, previous research experience, work experience in industries, and the degree of the current undergraduate institution. It predicts how likely something is to be adopted and employs explainable AI tools, such as SHapley Additive exPlanations (SHAP), to understand the key elements in a profile and areas for further enhancement. It breaks universities(Top 150 QS ranked) down into 3 different categories – Target, Consider, and Reach, per type of applicant and institution. Also, an underlying "what-if" simulation can help applicants see how differences in test scores and elements of their profile could affect their estimate of a successful student. Such a system enables students to make their choices obvious and using data, providing simple suggestions, and continually updating admissions information. By simplifying profile assessment, explaining decision-making, college suggestions, and customized plans into one system, it makes it easier and more user-friendly for students to handle the process of getting graduated. An accurate prediction with good recommendation should not be an undone fact, due to past admission data, to test this concept as accurately and effectively as possible.

Keywords: Graduate admissions, QS Rankings, Explainable Artificial Intelligence (XAI), Machine learning, SHapley Additive exPlanations (SHAP), Large Language Models (LLMs), University recommendation, Admission competitiveness, Decision-support systems.
